LUMIONO / PUBLIC SAMPLE

AI Visibility Report

Sample of the $49 AI Visibility Report format - a real self-audit of lumiono.com, not a client testimonial. Checked 8 November 2026, approximately 02:19-02:22 IST (Asia/Calcutta). This public sample covers 12 checks and top fixes. It is a technical-readiness sample, not a completed multi-engine recommendation study. No composite score, fabricated result, performance estimate or promised ranking is included.

12 checks: evidence and limits

1. Public HTTPS access

Observed

Homepage returned HTTP 200. This proves retrieval from this test location, not indexing.

Source: https://lumiono.com/

2. Robots policy

Observed

robots.txt returned 200 and explicitly allows GPTBot, OAI-SearchBot, PerplexityBot and ClaudeBot at /. /api/ and /dl/ are disallowed in the general group. These declarations do not prove a crawler visited.

Source: https://lumiono.com/robots.txt

3. Crawler-agent requests

Observed; limited simulation

Four homepage requests using those bot user-agent strings each returned 200. These are ordinary requests with changed headers, not requests from verified crawler IPs; bot-specific access remains unverified.

Source: https://lumiono.com/

4. Machine-readable summary

Observed

llms.txt returned 200 and lists the $49 report first, with 24-hour delivery. Publishing llms.txt is optional/experimental; it does not establish AI recommendation presence.

Source: https://lumiono.com/llms.txt

5. Structured data

Parsed automatically

Homepage contains 3 parseable JSON-LD blocks and no JSON parse errors. Types include ProfessionalService, Person, WebSite, Offer and FAQPage. This is syntax inspection, not a Google rich-results eligibility test.

Source: https://lumiono.com/

6. Title and description

Manual review of fetched HTML

The homepage title remains "Lumiono - be the answer AI gives your buyers" and the description says it makes a business the name AI assistants quote. Neither leads with the $49 report; wording is stronger than the no-guarantee hero copy.

Source: https://lumiono.com/

7. H1 and visible offer

Observed

H1 is "See your AI visibility gaps." The hero includes $49, 24 hours, a direct report checkout link and a no-ranking/no-citation-guarantee disclaimer.

Source: https://lumiono.com/

8. Canonical and sitemap

Observed

Homepage canonical points to https://lumiono.com/. sitemap.xml returned 200. Its homepage lastmod was 2026-10-29, despite the 8 November offer update; update lastmod only when content actually changes.

Source: https://lumiono.com/sitemap.xml

9. Entity/contact and GBP

Manual public-page review; partial

Homepage names Shiva Prasad Maharana, provides a business email, WhatsApp contact and LinkedIn link. This is a remote studio, not a dental clinic. No street address or Google Maps/GBP link was found on the homepage. No independent GBP verification was performed; absence on the homepage is not evidence that no profile exists.

Source: https://lumiono.com/

10. Speed

Measured HTTP transport only

One homepage fetch transferred 52,255 response-body bytes in 1.612 seconds from this box. This includes network time, not complete rendering. Four additional requests reached response headers in 1.269-1.619 seconds. No Lighthouse, field Core Web Vitals, mobile LCP/INP/CLS or visitor performance estimate was run.

Source: https://lumiono.com/

11. Search discoverability

Manual web-search observation

A branded web search for "Lumiono" "AI visibility" returned About, llms.txt, checklist, case-study and terms URLs. The returned search snippet for llms.txt was older than the live primary-offer update. Search results are not an AI-answer citation/share-of-voice measurement.

Source: https://lumiono.com/about

12. AI-answer presence

Not measured in this sample

No fresh ChatGPT, Gemini, Claude, Perplexity or Google AI Overview answer runs were made. No AI visibility percentage, rankings or competitor-wins number is claimed. Historical self-published 0/40 results were not

reused as current evidence. A production answer matrix must log engine, prompt, date, full answer and citations, or explicitly mark the engine unavailable.

Top five fixes

P1 - Align the homepage metadata

Lead title and meta description with "AI Visibility Report - $49, delivered in 24 hours". Replace deterministic visibility wording with scoped deliverables.

P1 - Replace ambiguous demonstration labels

The fetched HTML says "chatgpt - live query" above an illustrative clinic answer and includes hard-coded 76/100 scores. Label illustrative content as demo and show any live score only with a fresh result timestamp and evidence. This sample did not verify those scores.

P1 - Reconcile payment and cancellation copy

Homepage states builds are 50% kickoff/50% go-live and monthly plans stop with 30 days notice; checkout asks the selected full listed amount and says 14 days notice. Separate the one-time $49 report terms from larger builds and reconcile policy language before selling recurring work.

P2 - Establish a reproducible answer baseline

Choose buyer prompts, run only available engines, archive exact answers/citations and distinguish branded discovery from non-branded recommendations. Do not infer absence from this technical scan.

P2 - Keep facts synchronized

Update accurate sitemap lastmod dates; reconcile the $49 lead offer across metadata, machine-readable summaries and older content. Maintain one owner-approved public entity/contact record; do not invent an address or a GBP.

Sample only. No guaranteed rankings or AI citations.
